

Male Germ Cells

- the process of maturation of male gametes in the wall of the seminiferous tubules.
- starts at puberty & continues throughout life.
- 3 stages
 - spermatocytosis
 - meiosis
 - spermiogenesis

Spermiogenesis

- morphological transformation of spermatids into spermatozoa without further cell division - spermiogenesis
- Initially each.

Motility of sperm - Lashing motility of sperm.

fertility - 2A - 72 hrs

duration - 64 days

- DNA division takes place in meiosis II in 1 only chromosome number changes
