3. Clinical Diagnosis

This six year old boy presented to the casualty with throat pain, dysphagia and breathing difficulty

1. Identify the disease and the usual causative organism
2. What is the finding in the X-ray?
3. Name four complications?
4. What is the treatment?
5. What is the prevention?

$V_1 + V_2 + 1 + 1 + 1 = 4$

acute epiglottitis

3. Clinical diagnosis

1. Identify the lesion and give two clinical features
2. What is the surgical treatment?
3. What is the medical treatment?
4. Name two other benign lesions of the larynx

1 + 1 + 1 + 1 = 4

vocal nodule

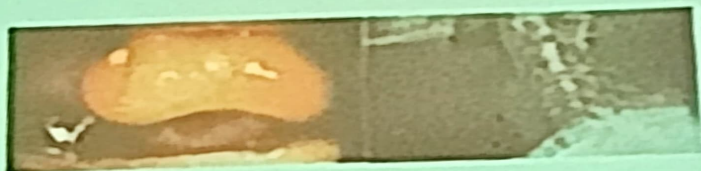

5. Analytical skill

A forty five year old lady presents with right sided throat pain of five days duration. Examination showed her drooling saliva with congested bulging right tonsil. Uvula is pushed to left side

1. What is the probable diagnosis?
2. What is the pathogenesis of the disease?
3. What are the possible complications?
4. How do you treat?

$$(\frac{1}{2} + 1 + 1 + 1\frac{1}{2} = 4)$$

3. Clinical Diagnosis

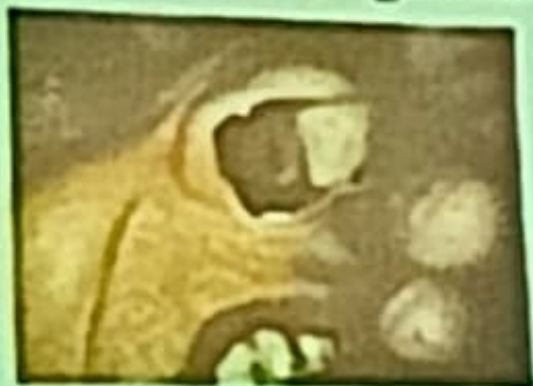

This six year old boy presented to the casualty with throat pain, dysphagia and breathing difficulty

1. Identify the disease and the usual causative organism
2. What is the finding in the X-ray?
3. Name four complications?
4. What is the treatment?
5. What is the prevention?

$$V_1 + V_2 + 1 + 1 + 1 = 4$$

3. Clinical Diagnosis

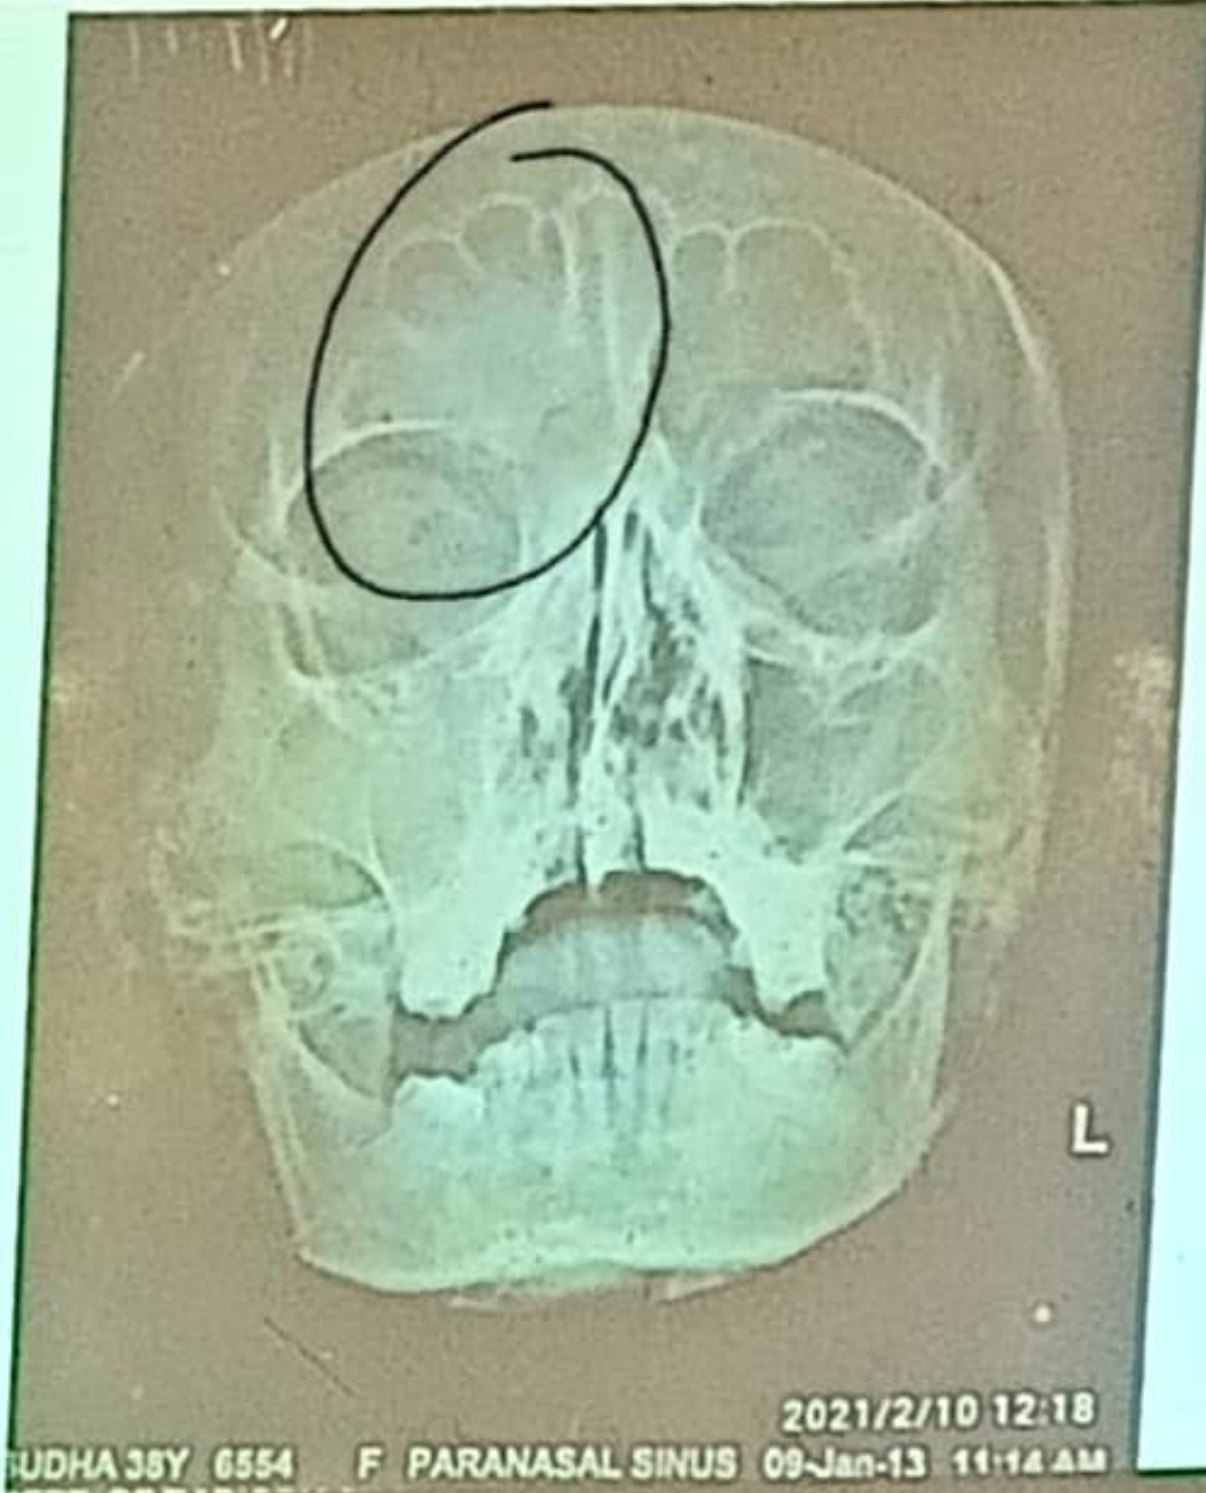

Above is the anterior rhinoscopic picture of a 30 year old man who presented with whistling sound on breathing and crust formation in the nasal cavity. He underwent septal surgery three years back.

1. What is the diagnosis?
2. Mention four etiological factors other than iatrogenic
3. What is the non-surgical treatment?
4. What is the surgical treatment?

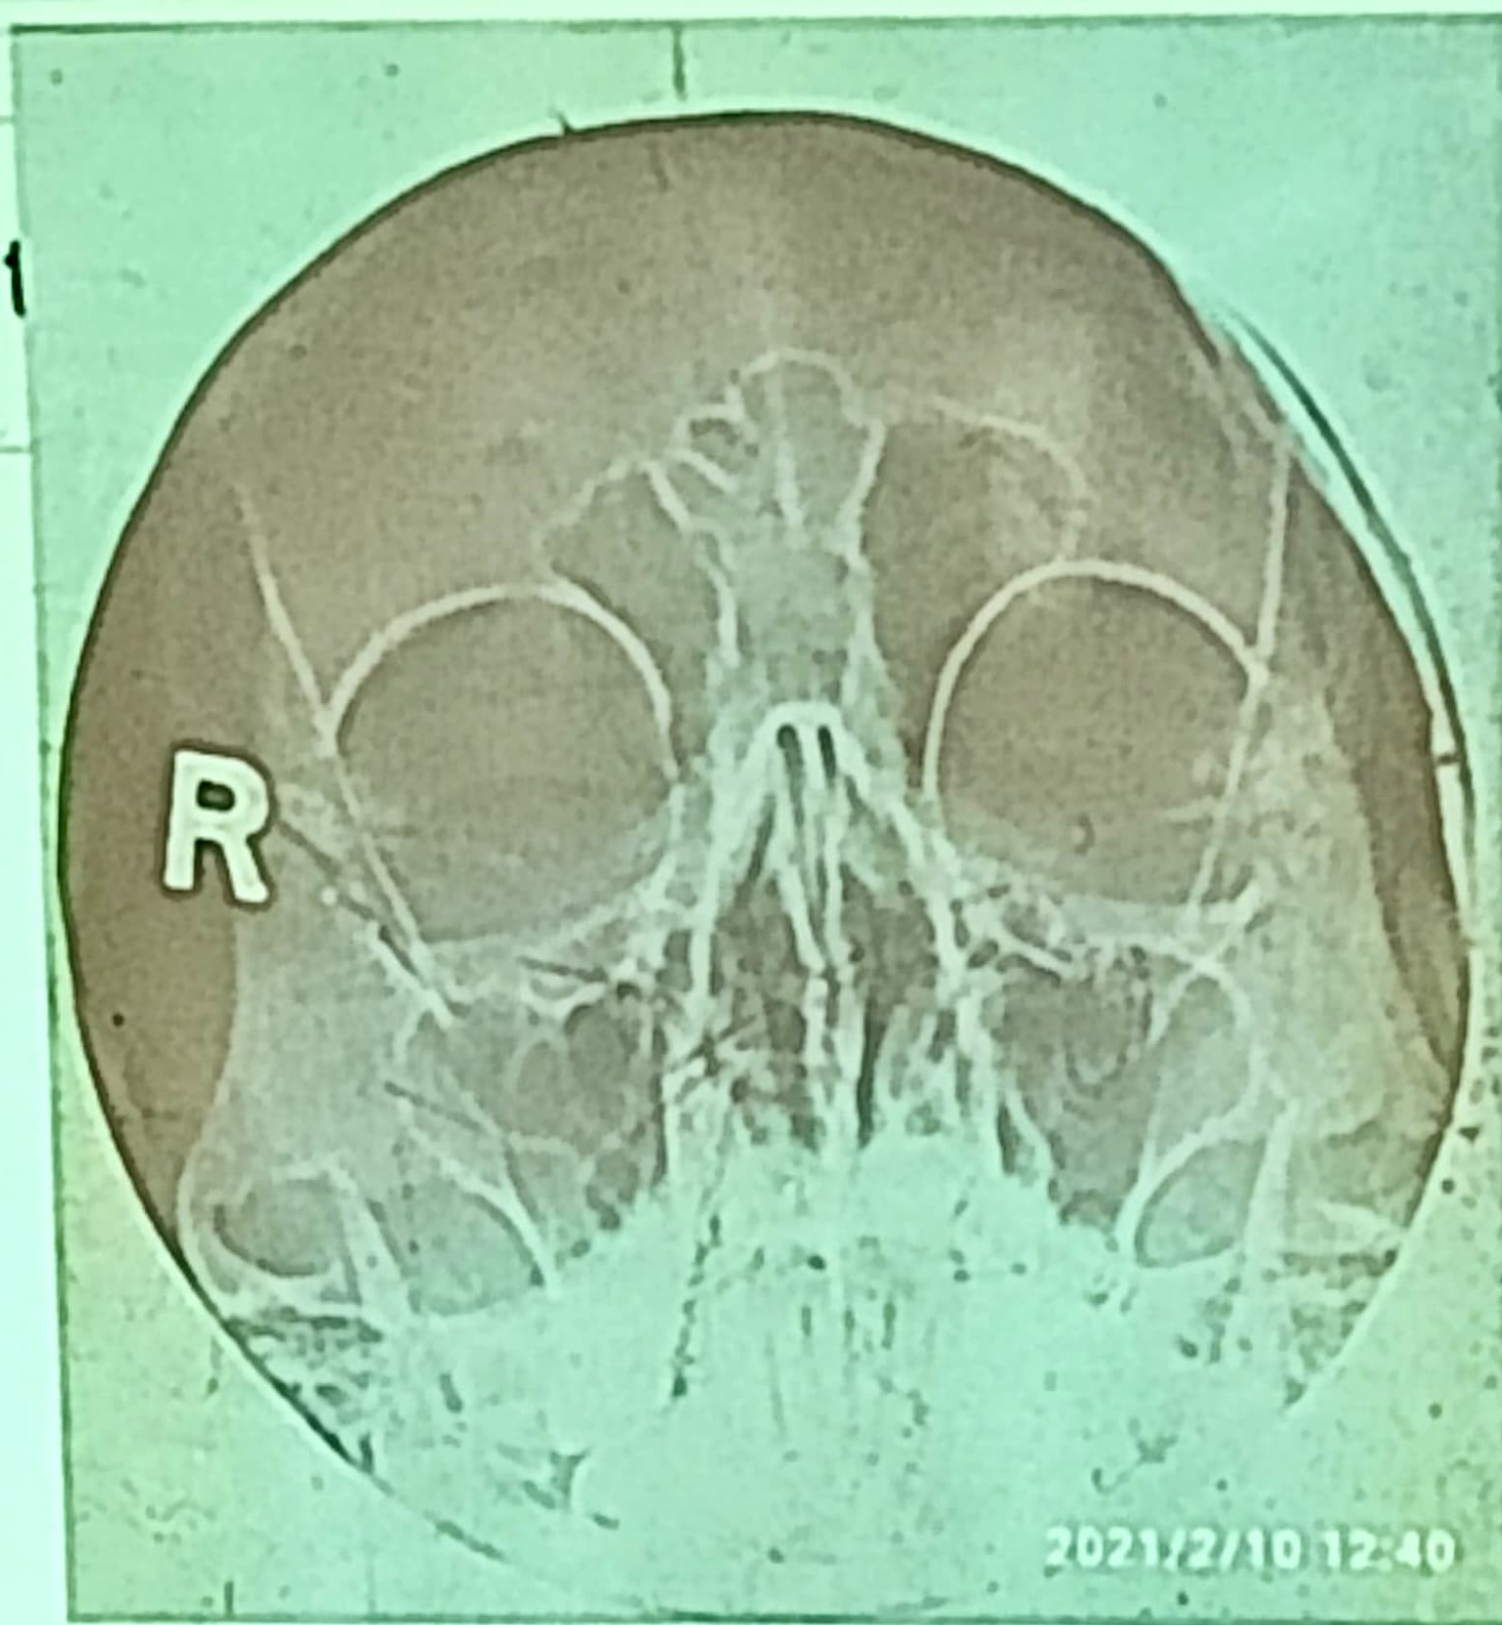

1 + 1 + 1 + 1 = 4

septal perforation

sinusitis

ck 1

cause for the same

2. List two emergency measures you would adopt in the casualty in this case
3. List two surgical procedures to control the bleeding
4. List five arteries supplying the tonsil

$1 + 1 + 1 + 1 = 4$ marks

fb

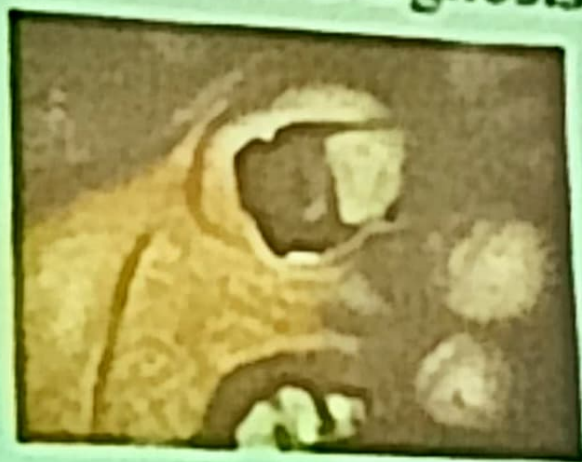

3. Clinical diagnosis

1. Identify the lesion and give two clinical features
2. What is the most likely diagnosis and surgical treatment
3. What is the most likely histological treatment
4. Name two other benign lesions of the skin

1 + 1 + 1 + 1 = 4

3. Clinical Diagnosis

Above is the anterior rhinoscopic picture of a 30 year old man who presented with whistling sound on breathing and crust formation in the nasal cavity. He underwent septal surgery three years back.

1. What is the diagnosis?
2. Mention four etiological factors other than iatrogenic.
3. What is the non-surgical treatment?
4. What is the surgical treatment?

Clinical case

ANTERIOR RHINOSCOPIC VIEW:

1. Identify the condition with reasons
2. List four proposed etiological factors in its development
3. List four ~~modalities of~~ medical management
4. List two surgical options

3. Clinical diagnosis

1. Identify the pathology in the picture and give two etiological factors
2. Name two relevant investigations
3. What is the most common histopathology
4. What are the treatment options
