RECALL SESSION

**A Mega Recall Session By
India's Top Educators**

Q. A patient has an infection caused by a beta-hemolytic, Gram-positive cocci in clusters, catalase-positive organism that is sensitive to oxacillin. What is the drug of choice?

- A. Vancomycin
- B. Cloxacillin
- C. Azithromycin
- D. Penicillin

Q. Which of the following statements about Ticagrelor are correct ?

- A. Acts on the P2Y₁₂ receptor
- B. Requires metabolic activation
- C. Reversible action
- D. Lower risk of intracranial bleeding than Clopidogrel

Q. Which of the following drugs shows concentration dependent killing ?

- A. Vancomycin
- B. Penicillin
- C. Aminoglycoside
- D. Linezolid

Q. Lamotrigine is the drug of choice for which type of seizure ?

- A. Atonic seizure
- B. Tonic Clonic seizure
- C. Myoclonic seizure
- D. Absence seizure

Q. All are novel antidepressants except ?

- A. Etizolam
- B. Vilazodone
- C. Trazodone
- D. Blonanserin

Q. A patient comes with respiratory depression, pin point pupils and unconsciousness. What is the antidote ?

- A. Flumazenil
- B. Fomepizole
- C. Naloxone
- D. Atropine

Q. A patient presents with excessive sweating, respiratory secretions and muscle weakness. Which drug activates acetylcholinesterase ?

- A. Atropine
- B. Pralidoxime
- C. Naloxone
- D. Flumazenil

Q. Which of the following statements is correct regarding the mechanism of action of Resmetirom ?

- A. Activate THR beta on liver
- B. Inhibit hepatic lipogenesis
- C.
- D.

Q. Cilnidipine does not cause reflex tachycardia because it blocks which of the following channels ?

- A. L type Ca^{+2} channels
- B. N type Ca^{+2} channels
- C. T type Ca^{+2} channels
- D. C type Ca^{+2} channels

Q. Which of the following drugs should not be given in a patient of mucormycosis ?

- A. Voriconazole
- B. Isavuconazole
- C. Liposomal Amphotericin B
- D. Posaconazole

Q. Identify the pharmacokinetic process shown in the image ?

- A. Zero order
- B. First order
- C. Metabolic rate
- D. Steady rate

Q. Which of the following receptors is coupled to the Gs protein ?

- A. M1 receptor
- B. M2 receptor
- C. Alpha receptor
- D. Beta receptor

Q. A patient with Dravet syndrome is started on Fenfluramine. Which of the following statements are correct ?

- A. Perform eye examination every 6 months
- B. Monitor LFT every week
- C. Monitor for cardiovascular disease
- D.

Q. Stimulant purgatives are contraindicated in which of the following conditions ?

- A. Spastic constipation
- B. Paralytic ileus
- C.
- D.

Q. The following X - ray image is seen in a patient. Which of the following is used in the treatment of this condition ?

- A. Antifungal
- B. Antibiotic
- C. Topical steroid
- D.

Q. What is the mechanism of action for Protamanid ?

A.

THANK YOU
