

WATER HARVESTING

- Term conservation implies to both, protection of water resources & building up of water reserves. Conservation of water resources requires •

1. Preservation of wastages

- Domestic consumption of water can be reduced by individuals by cultivating better habits in kitchen & bathroom, to avoid free running water •

2. Water Harvesting • Important to preserve & build up underground water reserves in urban & semi urban areas.

- Rainwater collected from Rooftops is brought into the Soaking pit by PVC

pipes

- Soaking pits are filled with layers of Stones, Gravel & Sand
- Rainwater is filtered through these layers & then travels by a PVC pipe into the nearby Tube Well
